

## CAPE TOWN PELAGIC TRIPS

We ask participants to meet at 6:45 a.m. at the Simon's Town harbor, for departure around 7:00 a.m. If you need a transfer, please e-mail [info@birdingecotours.com](mailto:info@birdingecotours.com)

We then head out of the beautiful False Bay, sailing very close to the dramatic sea cliffs of Cape Point, Africa's southernmost tip. Before leaving the bay we will already encounter our first pelagic seabirds, such as **Sooty Shearwater** as well as **Subantarctic Skua** and **Cape Gannet**. Heading south from Cape Point we are likely to encounter **Cory's**, **Manx**, and **Great Shearwaters** in the summer. The greatest spectacles await us when we reach the rich trawling grounds 30 km or so beyond Cape Point. Literally thousands of albatrosses, petrels, pattering flocks of storm petrels, and many others gather around hake-fishing boats. This is one of the most unbelievably amazing spectacles that any birder can experience! **White-chinned Petrels** are normally the most abundant birds around the trawlers, with smaller numbers of **Southern** and **Northern Giant Petrels** and the odd **Great-winged Petrel**. The Cape is one of the best places in the world to find **Spectacled Petrel**; these birds enter our waters in the summer in very low numbers. Although sightings are far from guaranteed, January/February are the best months for this species. Albatrosses are normally present in large numbers and include **Shy**, **Black-browed**, **Indian Yellow-nosed**, and **Atlantic Yellow-nosed Albatrosses**, while we are always on the lookout for the rarer **Wandering**, **Southern**, and **Northern Royal Albatrosses**. During the winter months large flocks of **Cape Petrels** push up from the cold Subantarctic waters as well as **Antarctic Prions**. **Storm-petrels** are dominated by **Wilson's**, with large numbers of **European** in the summer, while **Black-bellied** is a passage migrant and only likely for a couple of weeks in April/May and again in September/October each year. Closer inshore we may encounter small numbers of **Parasitic** and **Pomarine Jaegers** during the summer months as they harass fishing terns, while **African Penguins**, **Cape**, **Crowned**, and **Bank Cormorant** are almost guaranteed as we come back into the harbour. One of the most exciting aspects of pelagic birding off the Cape is that you never know when the next mega-rare species may turn up!

Some people are wary of seasickness, but for those who brave this, pelagic trips can be true highlights of any birding career. With luck we may also find **Bryde's Whale** as well as **Humpback** and **Southern Right Whales** (both seasonal visitors), **Cape**

**Fur Seal**, and dolphins (**Long-beaked Common** and **Dusky Dolphins** are most abundant). The boat returns to the harbor at about 3:00 p.m.

The guide for day trips is allocated only after you have booked, as all of them are run as private trips. But we always use the country's top birding guides.

The price is R2100 per person for 2018 and R2300 per person for 2019, which is based on a group size of 6 - 8 participants plus the guide.

### **Preparation for a Pelagic Trip:**

This applies to our Cape Town pelagic trips. Please note that by request we also arrange 1-day pelagic trips in Mozambique, Namibia, Australia, New Zealand, the USA, etc., and these notes generally apply for those as well. A pelagic trip is run over the course of one day and involves heading out into the open ocean in search of various species only occurring out at sea. While this is a truly spectacular adventure, one must remember that we are always at the mercy of the ever-changing sea conditions.

The vessel will depart from the specified port around sunrise and ventures out into the ocean for usually a maximum distance of 30 nautical miles from land. Off southern Africa this is usually the 'drop zone', where deep water is present and many fishing vessels operate. On a pelagic trip we strive to try and find a fishing vessel, whether it be a trawler or a long-liner, as they attract huge masses of birds. We spend most of the day out at sea (depending on weather and sea conditions) and return to our port of departure in the afternoon (usually any time between 2:00 and 4:00 p.m.). We provide a light lunch on board with various snacks, eats, and drinks, although if you should want anything specific we recommend that you bring it yourself.

A pelagic trip is booked over two consecutive days (usually a weekend). The first day is used as the primary day, but should the previous day's weather forecast indicate that sea and/or weather conditions will prove more adverse on the first day, yet better on the second day, the pelagic trip will go ahead on the second day. However, it is possible that the trip may not go ahead at all due to adverse conditions over the entire two-day period. This is, unfortunately, not something we can predict and reliably confirm far in advance, and we are at the mercy of the weather/sea conditions and the word from our very experienced skippers, who ultimately give the final approval. Your safety on board the vessel is of paramount importance to us, and should the conditions of the sea prove to be too dangerous, the vessel will not go out. The pelagic trip is confirmed by the skipper either way a few days before it is due to depart. We will keep you informed about the decision.

What you will require:

- Most important is a waterproof layer of clothing. There is often wind out at sea, and it blowing off the swells creates some spray. It is very easy to get wet on board, especially while heading out to the trawling grounds and returning back to port.

- Layered and warm clothing. No matter the conditions predicted, whether it be sun or cloud, it can get cold out at sea, and bringing warm clothing is advised. It is also recommended to bring layered clothing, so that you can remove/add on as the conditions change.
- Applying sun lotion or anti-sunburn cream is recommended, no matter the conditions. It is very easy to get badly burned out at sea, whether it be a sunny or cloudy day.
- It is recommended to bring a hat that can be fastened to your head to prevent it from being blown away. Sunglasses are also recommended, as the glare from the ocean can be very bad at times, but note that it is very easy to lose a pair of sunglasses, and they will invariably pick up some spray from the ocean.
- Due to the nature of the pelagic trip, water/spray invariably gets on board the vessel, and it is very easy to get your feet completely wet. Either waterproof hiking boots or sturdy Teva-type sandals that can be fastened to your feet are recommended.
- Anti-seasickness medication: Not everyone is affected by seasickness, but it is a very unpleasant experience should you get seasick. Various tablets, such as Stugeron, are recommended. Should you be prone to seasickness, it might be worth consulting your local pharmacist for stronger medication.
- Binoculars and cameras are recommended (as in any birding excursion), but again please note that they can very easily get wet and could get damaged as a result. A covering over your camera is advised.

**Duration:** 1 day  
**Group Size:** 6 – 8  
**Start:** Simon's Town or Hout Bay  
**End:** Simon's Town or Hout Bay  
**Price:** R2100 per person (2018), R2300 per person (2019)
