

**NEW CALEDONIA:
KAGU AND OTHER ENDEMIC**

10 - 15 DECEMBER 2019

Kagu, our main endemic target of this trip

Tour Summary

This tour visits Grande Terre, New Caledonia, and focuses on the many exciting endemic birds found across the island.

Grande Terre is part of an ancient archipelago of Gondwanan (continental) origin. Most of the island is covered in tropical evergreen forest at higher elevations, while savanna and maquis dominate the lower elevations. Most famous for being the home of the unique **Kagu**, Grande Terre hosts a total of 18 island endemics as well as about a dozen more Melanesian endemics. We will spend time at the following areas: Parc de la Rivière Bleue, Mt Koghi, and the Farino area. The prime target will be finding the endemic star bird of New Caledonia, the charismatic **Kagu**.

Most endemics found on Grande Terre should be encountered during the time we have, and these include **White-bellied Goshawk**, **Kagu**, **Cloven-feathered Dove**, **Goliath Imperial Pigeon**, **Horned Parakeet**, **New Caledonian Parakeet**, **New Caledonian Myzomela**, **Barred Honeyeater**, **New Caledonian Friarbird**, **New Caledonian Whistler**, **New Caledonian Crow**, **New Caledonian Cuckooshrike**, **Yellow-bellied Flyrobin**, **Green-backed White-eye**, **Striated Starling**, and **Red-throated Parrotfinch**. Two species, the Critically Endangered (IUCN) **Crow Honeyeater** and the increasingly rare **New Caledonian Thicketbird**, are becoming more difficult year by year, but we will still try to find them in suitable areas in which they may still be hanging on.

New Caledonian Crow, one of the many endemics we will encounter on this tour.

Itinerary (6 days/5 nights)

Day 1. Arrival in New Caledonia

Arrival at La Tontouta International Airport, Grande Terre, New Caledonia, and transfer to our hotel in Nouméa. Afternoon at leisure.

Overnight: Nouméa

Days 2 – 3. Full day birding at Parc de la Rivière Bleue

We will travel to Parc de la Rivière Bleue in search of endemic birds over these two days, including the star endemic, the flightless and extremely rare **Kagu**. We will focus our attention on finding this great bird and getting the best views, and hopefully photographs, possible.

While searching for the Kagu we are likely to come across many other endemics and regional specialties, such as **New Caledonian Parakeet**, **New Caledonian Myzomela**, **Barred Honeyeater**, **New Caledonian Friarbird**, **Green-backed White-eye**, **Fan-tailed Gerygone**, **Metallic Pigeon**, **Goliath Imperial Pigeon**, **Sacred Kingfisher**, **South Melanesian Cuckooshrike**, **Crow Honeyeater**, **New Caledonian Cuckooshrike**, **Horned Parakeet**, **Southern Shrikebill**, **Yellow-bellied Flyrobin**, **Red-throated Parrotfinch**, **White-bellied Goshawk**, **Cloven-feathered Dove**, and **New Caledonian Crow**.

Overnight: Nouméa

We'll bird Parc de la Rivière Bleue for birds such as New Caledonian Friarbird.

Day 4. Morning birding at Mount Koghi and transfer to Sarraméa

We will spend the morning birding Mount Koghi and the surrounding area for a range of endemic birds, such as the simply-spectacular endemic **Cloven-feathered Dove**, which is a real assault on the eyes, and the endemic **White-bellied Goshawk**. This area was once a stronghold for the declining and now quite rare **New Caledonian Thicketbird**, so we will be checking suitable habitat for that species. We will also look here for the unique, tool-using **New Caledonian Crow**, and we may also get our first look at the humongous **Goliath Imperial Pigeon**.

In the afternoon we will transfer to the Farino area for a couple of nights' stay in the central section of Grande Terre.

Overnight: Sarraméa

Day 5. Full day birding the Farino area

We will spend the full day birding around Farino and the surrounding area, such as Parc des Grandes Fougères. Again we will target the rare **New Caledonian Thicketbird** while in suitable habitat, where we may also find **Red-throated Parrotfinch**. Other special birds here may include **Cloven-feathered Dove**, **New Caledonian Crow**, and **Horned Parakeet** among many other species such as **Southern Shrikebill**, **Yellow-bellied Flyrobin**, **New Caledonian Whistler**, and **Striated Starling**. The forests here also have a population of **Kagu** that is increasing in size due to predator control, so we may again bump into this unique species.

Overnight: Sarraméa

Day 6. Transfer from Sarraméa to La Tontouta International Airport, departure

We will have time for some morning birding around our hotel grounds, seeking any more endemics or regional specialties, such as **Red-throated Parrotfinch**, **Melanesian Flycatcher**, and **Cloven-feathered Dove** before we transfer back to La Tontouta International Airport, where the tour concludes in the midafternoon.

Melanesian Flycatcher can be seen in the Sarraméa area.

Please note that the itinerary cannot be guaranteed as it is only a rough guide and can be changed (usually slightly) due to factors such as availability of accommodation, updated information on the state of accommodation, roads, or birding sites, the discretion of the guides and other factors such as internal flight availability. In addition, we sometimes have to use a different international guide from the one advertised due to tour scheduling.

Duration:	6 days
Limit:	4 – 8
Date:	10 - 15 December 2019
Start:	Nouméa (La Tontouta International Airport), New Caledonia
End:	Nouméa (La Tontouta International Airport), New Caledonia
Price:	US\$3,305 per person sharing, based on 4-8 participants
