

**SOUTH AFRICA BIRDING AND PHOTO TOUR –  
WESTERN CAPE, WITH EXTENSION TO KRUGER  
NATIONAL PARK**

**1 – 11 (15) SEPTEMBER 2021**

*The endemic **Cape Rockjumper** will be searched for in the Cape Fold Mountains.*

South Africa's Western Cape Province is scenically stunningly beautiful and hugely varied – from rocky sea cliffs and impressive mountains rising straight out of the sea to everything from moist temperate forests to semi-desert, peaceful lakes, and a great deal more.

We begin our Cape birding photo tour in one of the world's most scenically spectacular cities, Cape Town. The growth of this city is constrained by imposing geographical features – Table Mountain, the Cape of Good Hope, and of course the sea – the whole of Cape Town is on a stunning-looking peninsula that was once an island. The Cape Peninsula is full of localized endemics restricted to the world's most plant-diverse floral kingdom, the Fynbos Biome (which has more plant species per unit area than even the Amazon). Some of these endemic birds restricted to the fynbos biome are dazzling; they include the likes of **Orange-breasted Sunbird**, **Southern Double-collared Sunbird**, **Cape Sugarbird** with its incredibly long tail, and many others. The nearby False Bay coast hosts one of the Cape's most sought-after birds, the charismatic **Cape Rockjumper** – along with **Cape Rock Thrush**, **Sentinel Rock Thrush**, and many others. We'll also look for seabirds, such as **African Penguin**, **Cape Gannet**, and more. The Cape is also famed for whale watching – **Southern Right Whales** in particular come very close inshore (seasonal).

*One of the most attractive of Africa's sunbirds, **Orange-breasted Sunbird***

After a few days around Cape Town itself we head to the West Coast, which is much drier and has a whole new suite of birds (and other wildlife) we will try to photograph. In the West Coast National Park and other great sites we hope to encounter **Common Ostrich**, **Black Harrier**, **Southern Black Korhaan**, **Cape Penduline Tit**, **Grey-winged Francolin**, and other stunning (and often very localized) birds. We will also look for new mammals, such as the West Coast endemic **Heaviside's Dolphin**, the strange **Rock Hyrax** (which looks like a large rodent but is more closely related to elephants), and others.

We then head inland to the Karoo semi-desert. This area has even more endemics than the Cape Peninsula (Fynbos Biome), and we will look for and try to photograph various larks, **Black-**

**headed Canary** and other canaries, **Karoo Korhaan**, **Ludwig's Bustard**, and all the others. There is also a chance of encountering some great mammals, which could even include something like a **Caracal** or **Aardvark** (both these require a huge dose of luck).

Eventually we head back to the coast – but this time the East Coast. After crossing imposing mountain ranges, which form rain-shadows that actually create the semi-desert in which we will have just spent time, we fairly abruptly find ourselves in a different world in amazing contrast to the arid Karoo – here we see green forests and beautiful lakes. This is the Garden Route – an idyllic area you truly will not want to leave. You could spend two weeks just here, photographing birds and other wildlife and of course the stunning scenery. However, the aim of this tour is to introduce you to the diverse habitats of the entire Western Cape Province. We do this at a pace suited to wildlife photography, though, and rush around a bit less than on one of our standard birding tours.

En route to the Garden Route, in the Agulhas Plains, we have a great chance at finding the fine-looking **Cape Mountain Zebra**, the striking **Bontebok**, and many wondrous birds such as **Secretarybird**, **White Stork**, **Denham's Bustard**, loads of **Blue Cranes** (South Africa's stunning national bird), some localized endemics such as **Agulhas Long-billed Lark**, **Cape Clapper Lark**, **Southern Tchagra**, and, as always, loads more.

*The vividly colored Cape Mountain Zebra.*

In the Garden Route itself we'll probably find the jewel-like **Half-collared Kingfisher**, the gorgeous (there is no better word for it) **Knysna Turaco** with its green body and scarlet underwings, and a rich diversity of other birds – plus some nice mammals, as always.

You can either fly or drive (5 hours) back to Cape Town from the Garden Route, or you can fly from the Garden Route to Kruger Mpumalanga International Airport for a 5-day extension at one of Africa's greatest game parks, the Kruger National Park. Here we have a good chance at photographing the "Big Five" as well as a host of other, smaller mammals. Kruger is one of the richest national parks for mammals on the entire African continent. What's more, it also has over

500 bird species, most of which are extremely easy to see in the dry woodlands and savanna – you will see multiple species of brightly colored and spectacular rollers, bee-eaters, storks, eagles, vultures, hornbills, and more.

### Itinerary (11 days/10 nights)

#### Day 1. Cape Peninsula

Depending on arrival times today we should have some time to enjoy some late-afternoon photography in the golden light. We will probably pop down to Boulders Beach and visit the **African Penguin** colony, where we should also come across **Cape** and **Crowned Cormorant**, **African Oystercatcher**, and perhaps a few terrestrial species in the nearby scrub.

Overnight: Mariner Guest House, Simon's Town

#### Day 2. Hottentots Holland and False Bay

Today we will spend the day to the east of Cape Town in the Hottentots Holland mountains, where we will be targeting a number of Cape endemics. The drive from Simon's Town is a spectacular one; the route straddles the coastline with dramatic fold mountains on the opposite side. During the drive we may get lucky with sightings of whales in False Bay, including **Bryde's** and **Southern Right Whales**.

Our first stop will be at the quaint coastal town of Rooi Els, where we will search the rocky mountain slopes for **Cape Rockjumper**. Other important birds to look for on the mountain slopes include **Cape** and **Sentinel Rock Thrushes**, **Cape Siskin**, **Ground Woodpecker**, and perhaps **Verreaux's Eagle** overhead. The thicker fynbos nearby will be searched for **Cape Sugarbird** (frequently posing on top of Protea flowers), **Orange-breasted** and **Malachite Sunbirds**, **Cape Bulbul**, **Grey-backed Cisticola**, and **Karoo Prinia**.

*The strange **Ground Woodpecker** is frequently encountered in the Cape Fold Mountains.*

We will then head around the corner to Betty's Bay to explore the beautiful Harold Porter National Botanical Garden. Here the birds are often very approachable, allowing for great photographic opportunities. **Sunbirds** abound in these gardens, including **Amethyst**, **Southern Double-collared**, **Orange-breasted**, and **Malachite**. We should also have the opportunity to become acquainted with **Southern Boubou**, **Olive Thrush**, **Cape Robin-Chat**, and **Fiscal Flycatcher**.

After enjoying lunch in the gardens we will head to the rocky coast at Stony Point to visit another **African Penguin** colony; however, the target here will be **Bank Cormorant**. Four species of marine cormorant breed here (**Bank**, **Crowned**, **Cape**, and **White-breasted Cormorants**) and often give you a chance to photograph them as they fly back and forth feeding chicks or constructing nests.

*We should encounter four species of marine cormorants in Betty's Bay, including **Cape Cormorant**.*

If time allows, we will pop into Strandfontein Bird Sanctuary on our way back to Simon's Town. This area represents the best wetland birding around Cape Town, and we will aim to photograph flying **Flamingos** (both **Lesser** and **Greater**) in the golden afternoon light with Table Mountain and the Hottentots Hollands Mountains serving as beautiful backdrops. Other waterbirds to be enjoyed here include **South African Shelduck**, **Maccoa Duck**, **Southern Pochard**, **Black-necked Grebe**, and many other common aquatic species. If we run out of time this afternoon we can head back here the following day.

Overnight: Mariner Guest House, Simon's Town

### Day 3. Cape Peninsula

Today will be spent birding and photographing on the Cape Peninsula. We will start the morning by heading south to the Cape of Good Hope Nature Reserve, where we will visit the most southwesterly point of the African continent. The views of False Bay and the Atlantic Ocean are

truly impressive, and from here we can also enjoy **Cape Cormorants** nesting on the cliffs below us along with the odd **Peregrine Falcon**. We may do a sea watch for various seabird species from the cliffs, when we should be able to pick out **Cape Gannet**, **White-chinned Petrel**, **Sooty Shearwater**, and perhaps an albatross or two! Around the reserve we will also keep a lookout for **Cape Grassbird**, **Cape Siskin**, **Cape Bunting**, and **Fiscal Flycatcher**. **Common Eland**, Africa's largest antelope, should be encountered during our time in the reserve as well as good numbers of **Common Ostrich**.

In the afternoon we will head to Kirstenbosch National Botanical Garden, where we will wander around the picturesque gardens with Table Mountain serving as a stunning backdrop. In the gardens we should find **African Olive Pigeon**, **Cape Bulbul**, **African Dusky Flycatcher**, **Cape Sugarbird**, **Orange-breasted Sunbird**, **Cape Brimstone**, **Forest Canaries**, and the tiny and colorful **Swee Waxbill**.

Overnight: Mariner Guest House, Simon's Town

*Cape Sugarbird regularly calls from Protea flowers in Kirstenbosch National Botanical Garden.*

#### Day 4. West Coast National Park

After a few great days around Cape Town we will head to the scenic west coast to look for a different suite of birds occurring in the strandveld vegetation. We'll start with some farmland birding around Darling in the glorious early-morning light. Hopefully **Blue Cranes** will pose for us while **European Bee-eaters** in their small colony here are often a little more edgy. We'll search the adjacent strandveld for **Cape Clapper Lark**, **Grey-backed Cisticola**, **Southern Black Korhaan**, **Chestnut-vented Warbler**, **Cloud Cisticola**, and **Pearl-breasted Swallow**. The wheat fields are normally alive with birds, and we can expect to also find **Pied Starling**, **Yellow Canary**, **African Hoopoe**, **Red-capped Lark**, and **Capped Wheatear**.

Next we will head farther north along the coast to West Coast National Park. We will try to time it right so that we arrive at the Langebaan Lagoon at a time when the shorebirds are close to the various hides on the lagoon. Here we can expect to see thousands of Palearctic shorebirds, which

should still be showing some breeding plumage at this time of year. Species to look for include **Bar-tailed Godwit, Eurasian Curlew, Whimbrel, Common Greenshank, Marsh Sandpiper, Grey and Common Ringed Plovers, Red Knot, Ruddy Turnstone, Curlew Sandpiper, Little Stint**, and occasionally **Terek Sandpiper**. Of the resident shorebirds we should find **White-fronted, Kittlitz's, Three-banded, and Chestnut-banded Plovers**.

The strandveld throughout the park will be explored for **Grey Tit, Long-billed Crombec, Chestnut-vented Warbler, White-backed Mousebird, Bokmakierie, Cape Penduline Tit, Grey-winged Francolin, Cape Weaver**, and our most important target, the graceful **Black Harrier**.

After leaving the park and before checking into our accommodation in Langebaan we should have time to look for the resident pair of **Verreaux's Eagles** just outside of town (if we run out of time today, we will ensure that we try the next morning).

Overnight: Le Mahi Guest House, Langebaan

### Day 5. West Coast and Tankwa Karoo

This morning we will leave early to explore the farmlands north of Langebaan. Some of the specials we'll look for here include **Blue Crane, Namaqua Sandgrouse, Acacia Pied Barbet, Cape Long-billed and Large-billed Larks, Grey-backed Sparrow-Lark, Sickle-winged and Ant-eating Chats**, and perhaps **Lanner Falcon**.

After a great morning's birding we will stop at a nearby salt works to try to improve our photos of **Chestnut-banded Plover** as well as **Lesser and Greater Flamingos, Black-necked Grebe, Red-necked Phalarope**, and other shorebirds. Heading farther inland (approximately a three-hours' drive) we will travel through some spectacular mountain passes before eventually dropping back down into the vast, dry plains of the Tankwa Karoo, where we will be based for the next two nights.

Overnight: Tanqua B&B, Route 355

*We normally get excellent views of **Chestnut-banded Plover** at the saltworks in Velddrif.*

### Day 6. Tankwa Karoo

The Tankwa Karoo is an endemism hotspot with many of the species we will encounter here being restricted to these endless and seemingly barren plains. Looks, however can certainly be deceiving, as we will spend the day hunting down many of these Karoo-adapted specials. The open plains will be searched for **Karoo Korhaan**, **Karoo Eremomela**, **Burchell's Courser**, **Namaqua Sandgrouse**, **Greater Kestrel**, **Black-eared Sparrow-Lark** (highly nomadic), **Tractrac** and **Karoo Chats**, **Rufous-eared Warbler**, and a host of lark species including **Karoo Long-billed**, **Karoo**, **Spike-heeled**, **Large-billed**, and **Red-capped Larks**. In the dry river beds we should be able to find **Namaqua Warbler**, **Fairy Flycatcher**, **Pririt Batis**, **Dusky Sunbird**, and **Acacia Pied Barbet**. We will also spend some time exploring rocky outcrops, where **Cinnamon-breasted Warbler** will be our primary target along with **Layard's Warbler**, **Pale-winged Starling**, and perhaps even **Black-headed Canary**. In the evening we will take a night drive to look for **Freckled** and **Rufous-cheeked Nightjars** and perhaps some of the Karoo's rarer nocturnal mammals.

Overnight: Tanqua B&B, Route 355

*Large-billed Lark — one of the many lark species we should encounter on this tour*

### Day 7. Agulhas Plains

After some early-morning photography in the Tankwa Karoo we will leave the dry plains and head southeast to the Agulhas area, where we will have two nights before continuing further east. The drive (roughly 3.5 hours) is another picturesque one as we make our way through the Cape Fold Mountains. We will keep a lookout for **Ground Woodpecker** and **Verreaux's Eagle** during the drive. Then we will spend some time birding the wheat fields in the Agulhas area, which are good areas for **Denham's Bustard**, **Karoo Korhaan**, **Cape Crow**, **Cape Long-billed Lark**, and **Blue Cranes** (usually in large numbers).

Overnight: De Hoop Collection, De Hoop National Park

**Day 8. Agulhas Plains**

We will visit the beautiful De Hoop National Park, which has good numbers of antelope and some great birding too. **Common Eland**, **Bontebok**, and **Cape Mountain Zebra** are normally seen easily and can be quite confiding. Top birds to look out for include **Agulhas Long-billed Lark**, **Southern Tchagra**, **Knysna Woodpecker**, **Secretarybird**, and **Black Cuckooshrike**. We will visit some impressive dunes that overlook the Indian Ocean, where we should see **Southern Right Whales**, which come to this stretch of the coastline to calf in winter and spring. We may also get views of **Cape Vulture**, which has a large breeding colony nearby. Overnight: De Hoop Collection, De Hoop National Park

*The endemic **Knysna Woodpecker**!*

**Day 9. Garden Route**

We'll take advantage of the morning light to try to improve on photos from the last couple of days before we drive (roughly three hours) further east to the forests and wetlands of Wilderness. En route we will keep a lookout for **Forest Buzzard**, which is sometimes seen perched on roadside pylons. We should have time this afternoon to visit one of the many wetlands in the area, where we could find **African Snipe**, **African Fish Eagle**, **Malachite** and **Pied Kingfishers**, and other waterbird species. We may also see small groups of **Red-necked Spurfowls** feeding on the roadside.

Overnight: Kingfisher Country House, Wilderness

**Day 10. Garden Route**

Today we will spend time among the various wetlands and forests in the Wilderness area. We will probably start the day at few wetlands, where we may get lucky with sightings of the elusive duo of **Red-chested Flufftail** and **African Rail**. We will then walk a few trails through beautiful forest along the Touws River. This will be our first bit of true forest birding on the trip, and there should be many new birds to find. The skulking **Knysna Warbler** will be searched for in thick

tangles of undergrowth, while we could even get incredibly lucky with a sighting of **Buff-spotted Flufftail**, although it puts **Knysna Warbler** to shame with its ability to remain hidden. Other forest species to look out for include **Back-backed Puffback**, **Black-headed Oriole**, **Chorister Robin-Chat**, **White-starred Robin**, **Green-backed Camaroptera**, **Terrestrial Brownbul**, **Yellow-throated Woodland Warbler**, **Blue-mantled Crested Flycatcher**, **Narina Trogon**, **African Emerald Cuckoo**, **Black-bellied Starling**, **Green Wood Hoopoe**, **Scaly-throated Honeyguide**, **Grey Cuckooshrike**, **Olive** and **Greater Double-collared Sunbirds**, and possibly the most beautiful of them all, **Knysna Turaco**. In the evenings we may get lucky with sightings of **African Wood Owl**.

Overnight: Kingfisher Country House, Wilderness

*Knysna Turaco is common in the Wilderness area.*

### Day 11. Departure

Depending on flight times this morning we may have time for some last-minute forest birding, targeting anything we may have missed over the last couple of days. George Airport is only a 20-minute drive from Wilderness, where you can take a flight or a five-hour drive back to Cape Town or a flight to Kruger Mpumalanga International Airport for the Kruger National Park extension.

### Kruger National Park extension

(Day 1 of the extension is the same as day 11 of the main tour.)

### Days 11 – 15. Kruger National Park

This extension offers a few days of photographing Africa's "Big Five" as well as small animals and a host of birds – many of them extremely photogenic. Of the big and obvious species we will look for **Kori Bustard**, **Martial Eagle**, **Bateleur**, **Saddle-billed Stork**, **Verreaux's Eagle-Owl**,

**Southern Ground Hornbill**, and **Lappet-faced Vulture**, while the smaller, more colorful species include **Greater Blue-eared Starling**, **Lilac-breasted Roller**, **Grey-headed Bushshrike**, **White-browed Robin-Chat**, and a host of kingfishers, barbets, hornbills, and weavers.

Overnight: Rest camps, Kruger National Park

*We may get lucky with a **Leopard** sighting in Kruger National Park!*

*Please note that the itinerary cannot be guaranteed as it is only a rough guide and can be changed (usually slightly) due to factors such as availability of accommodation, updated information on the state of accommodation, roads, or birding sites, the discretion of the guides and other factors.*

**Duration:** 11 or 15 days

**Group size:** 4 – 7

**Dates:** 1 September – 11 or 15 September 2021

**Start:** Cape Town

**End:** George

**Prices for the main tour:** R60,204 per person sharing (2021)

**Single supplements:** R9,555 (2021)

**Prices for the extension:** R32,017 per person sharing (2021)

**Single supplements:** R5,274 (2021)

**Price includes:**

Meals  
Accommodation  
Entrance fees  
Guiding fees  
All transport while on tour  
Bottled water through the entire tour

**Price excludes:**

International flights  
Flight George – Kruger for the extension  
Personal insurance  
Drinks  
Tips  
Laundry  
Personal expenses such as gifts
