

BIRDING TOUR SOUTH AFRICA: BEST OF CAPE TOWN AND BEYOND: ENDEMICS, SEABIRDS AND MORE

07 - 14 OCTOBER 2025

07 - 14 OCTOBER 2026

The endemic Cape Sugarbird is one of our targets on this trip.

South Africa must surely rank as one of the best value destinations on the entire African continent. The combination of superb accommodation, excellent infrastructure, great food, wonderful South African hospitality, impressive and varied scenery, and the presence of Africa's big and small mammals makes it one of the most popular countries in the world to bird in. The tour begins in one of the world's most beautiful cities, Cape Town, where we will search for a host of avian endemics found nowhere else but in the fynbos of the Cape Floral Kingdom (the richest place on earth for plants). While in Cape Town we will also do a pelagic trip, enjoying the great numbers and diversity of seabirds which visit the southern tip of Africa. After a few days birding around Cape Town we then head northward up the west coast and finally head inland through rugged mountain ranges into the Tankwa Karoo, another of Africa's great endemic hotspots.

We begin this tour with a private Cape pelagic trip, where we invariably find four albatross species and always hope for an additional rarer one like **Wandering Albatross**. Then we hope to encounter some very enigmatic birds: Watch a weird little warbler, a desert bird that skulks, disappear into a rock crevice, namely **Cinnamon-breasted Warbler**, one of the Cape's strangest endemics and one of the toughest of the many Karoo endemics to see well. **Cape Rockjumper** has a beautiful call, striking colors, a boisterous personality and a terribly limited distribution around Cape Town. A terrestrial woodpecker, **Ground Woodpecker**, and **African Penguin** are also found on the spectacular <u>Cape Peninsula</u>. What more can you possibly ask for of a Cape birding tour?

Cape Rockjumper is one of the two species making up the rockjumper family; we normally encounter it on this tour.

But this trip is not only full of localized avian endemics but also of spectacularly famous scenery, such as the <u>Cape of Good Hope</u>, <u>Cape Point</u>, and <u>Table Mountain</u>. All in all, our eight-day Cape tour is full of <u>localized endemics</u>, spectacular scenery, and so much more. This is where <u>Birding</u>

Ecotours started as a company in 2002, and nowhere else do we have as much experience as in the Cape.

The Western Cape is the most important endemic bird area on the entire African continent. It is a truly essential area for any serious birder because of its sheer number of endemics. Pelagic trips off Cape Town also rank as among the finest in the world (with at least four albatross species, Cape Petrel (seasonal), and many more on the rich trawling grounds near where two oceans meet). The Cape is also a spectacularly scenic area, with the rugged Cape Fold Mountains that come right down to the sea, white sand beaches, sea cliffs on the Cape Peninsula, and beautiful vineyards. Close inshore Southern Right Whales (seasonal) plus a lot of other mammals, spectacular carpets of flowers (seasonal), and the most plant-diverse biome on earth (even richer than the Amazon!) are major attractions that are easily seen incidentally, while not jeopardizing our chances of finding all the birds. We recommend at least a week in the Western Cape. The aim of our standard (set departure) eight-day tour (but we can custom-make a trip of any length) is to find a majority of the endemics of this province, with many other species as an unavoidable byproduct (plus, as always, an amazing overall experience), and of course a lot of pelagic and other seabirds. To find the endemics we budget adequate time in each strategic ecosystem – the fynbos, Langebaan Lagoon, and the Karoo.

Cape Petrel is usually seen on our pelagic trip on our eight-day Cape tour.

The October departures can be combined with our preceding Kruger National Park and Escarpment Birding Safari and then with our following Subtropical South Africa Birding Tour: Comprehensive Eastern South Africa for a 38-day South African adventure, and, following that, with our Namibia, Okavango and Victoria Falls 18-day Birding Adventure for a stunning 46-day Southern African mega tour.

Itinerary (8 days/7 nights)

Day 1. Arrival in Cape Town

This is the day you need to arrive in Cape Town – any time during the day at your leisure. You will be met at Cape Town International Airport and transferred to our comfortable guesthouse in the leafy Cape Town suburbs. We should hopefully have some time to start with some local birding this afternoon – probably birding one of the many impressive wetlands nearby, or perhaps the forests on the slopes of Table Mountain. Species to look for include **Great White Pelican**, **Greater** and **Lesser Flamingo**, **Cape Teal**, **Cape Shoveler**, **Southern Pochard**, and **Maccoa Duck** among many other waterfowl species. Some of the more elusive species we will search for are **Little Bittern**, **African Snipe**, **African Marsh Harrier**, **Malachite Kingfisher**, four species of reed-associated warblers, and other waterbirds. The forested areas host species such as **African Olive Pigeon**, **Cape Batis**, **Southern Boubou**, **Olive Thrush** and **African Dusky Flycatcher**. In the neighboring fynbos we should come across the first of many South African specials, such as **Cape Bulbul**, **Karoo Prinia**, **Southern Double-collared Sunbird** and **Cape White-eye**.

Overnight: Greater Cape Town area

The comical African Penguin is always a highlight in any Cape birding trip!

Day 2. Cape Town pelagic trip (or Cape Peninsula and False Bay birding)

Today is an early start as we embark on a <u>Cape pelagic trip</u> (weather-permitting, otherwise we will spend the day around the Cape Peninsula and False Bay). Soon after leaving the harbor we normally come across large flocks of **Cape Cormorants** and **Cape Gannets** heading out to sea to fish for the day, along with the occasional **African Penguin**. The coastline is incredibly rugged,

5 | ITINERARY

yet eerily beautiful, with the sharp mountains rising right from the shore. Once we start transiting away from land the serious pelagic birding soon begins as we start seeing good numbers of **Sooty**, Great, and Cory's Shearwaters, White-chinned Petrels, and the odd Storm Petrel (Wilson's and **European** being most common). As we head farther out we will be on the lookout for trawlers, which attract huge numbers of seabirds. If we do find a trawler it normally has a cloud of seabirds behind it, particularly when the nets are being hauled in. Here we can expect to find Shy, Blackbrowed, Indian Yellow-nosed and Atlantic Yellow-nosed Albatrosses, Northern and Southern Giant Petrels, Cape Petrel, Brown Skua, and occasionally Great-winged Petrel. We will always be on the lookout for Spectacled Petrel, Northern and Southern Royal Albatrosses, and Wandering Albatross which, although considered rare, are seen with some frequency off the Cape.

Albatrosses such as this Atlantic Yellow-nosed Albatross are usually seen on our Cape pelagic.

Other marine life to search for include Humpback and Bryde's Whales as well as Long-beaked Common Dolphin and, if we are extremely lucky, Killer Whale! If possible/already decided, please let us know if you do not want to join the pelagic.

Overnight: Greater Cape Town area

Day 3. Birding the Cape Peninsula and False Bay (or Cape pelagic trip)

Today we plan to visit excellent sites such as the beautiful Hottentot Holland mountain range and Strandfontein Bird Sanctuary, one of Cape Town's best waterbird sites. We start the day with an early departure (we'll take breakfast packs along to enjoy later) heading east toward the Hottentot Holland mountains and particularly the small village of Rooi Els. To get to this picturesque village we have to traverse one of the most scenic drives in South Africa along the False Bay coast. First,

we drive parallel to an extremely long white beach bordering the Cape Flats that separate the mountainous Cape Peninsula from the inland Cape Fold mountain ranges. Then we reach an area where impressive mountains meet the sea to begin a truly stunning marine drive. Our primary target for the day is Cape Rockjumper, which only occurs in the Cape Fold Mountains. Rooi Els is perhaps the easiest and most accessible spot to see the rockjumper, and our success rates are high. Other species to find here and nearby include Ground Woodpecker, Cape Rock Thrush, Victorin's Warbler, Cape Siskin, Cape Grassbird, Cape Sugarbird, and many others. We may be lucky with a flyover of the pair of Verreaux's Eagles that breeds in the area.

We then head to the small town of Betty's Bay, where we visit the picturesque Harold Porter National Botanical Garden and enjoy lunch after a walk around the gardens. In the gardens we should find African Dusky and African Paradise Flycatchers, Black Saw-wing, Swee Waxbill, Yellow Bishop, and Brimstone and Cape Canaries.

The cute and beautiful Swee Waxbill.

We will also be sure to include a visit to the nearby Stony Point African Penguin colony. In addition to the penguins, Stony Point also has numbers of breeding Cape, Crowned, and Bank **Cormorants** – all offering excellent and close-up views!

On our way back to Cape Town we may visit Strandfontein Bird Sanctuary, which offers Cape Town's best wetland birding. Species to look for here include South African Shelduck, Bluebilled, Red-billed, and Cape Teals, Maccoa Duck, Cape Shoveler, Great Crested and Blacknecked Grebes, African Swamphen, and a number of other waterbird species.

Overnight: Greater Cape Town area

Day 4. West Coast Birding

Today we head north of Cape Town and travel along the west coast. The <u>strandveld vegetation</u> is subtly different and, with the habitat change, results in a different mix of bird species. We will stop off in some farmlands en route to look for **Blue Crane**, **Pied Starling**, **Cape Clapper Lark**, **Capped Wheatear**, **Cape Longclaw**, **Pearl-breasted Swallow**, and the endemic Cape subspecies of **Cloud Cisticola**. Birding the strandveld habitat around the <u>West Coast National Park</u> and its surrounding areas will hopefully produce **Cape Penduline Tit**, **Grey Tit**, **White-backed Mousebird**, **Bokmakierie**, **Karoo Scrub Robin**, **Yellow** and **White-throated Canaries**, **Greywinged Francolin**, **Southern Black Korhaan**, and the striking **Black Harrier**. We will also spend time at a few of the strategically positioned bird hides along Langebaan Lagoon, one of Africa's most important shorebird stopover sites. Here we hope to find an assortment of Palearctic shorebirds as well as resident shorebirds, such as **Chestnut-banded**, **White-fronted**, and **Kittlitz's Plovers**, with the possibility of **Osprey** and **African Fish Eagle** overhead. We may have time to look for Langebaan's resident pair of **Verreaux's Eagles** this afternoon; if we run out of time, we will look for them tomorrow morning.

Overnight: Le Mahi Guest House, Langebaan

The majestic **Blue Crane** is commonly encountered on this tour.

Day 5. Transfer to the Karoo

We often start this day by birding some of the farmlands north of Langebaan for a few more endemics that are unlikely to be found elsewhere on the trip. Our primary targets this morning will be Cape Long-billed Lark and Sickle-winged Chat; however, we should also find Large-billed Lark, Grey-backed Sparrow-Lark, Blue Crane, Ant-eating Chat, and perhaps Namaqua Sandgrouse. After our early-morning birding we head inland through some spectacular mountain

scenery. But we have to get to the eastern (rain-shadow) side of the mountains to get to the famed (among birders) Karoo. The Karoo exhibits an amazing level of endemism, as the species need to adapt to the incredibly harsh conditions. This makes for spectacularly exciting birding for any serious birder who has never visited this particular semi-desert.

Overnight: Tankwa Karoo/similar

Day 6. Birding the Karoo

Today we will have a full day of Karoo birding. Dry, rocky gorges will be explored for Cinnamonbreasted Warbler (a truly bizarre rock crevice skulker) as well as Layard's Warbler, Grey Tit, Fairy Flycatcher, and Booted Eagle overhead. In the riverbed vegetation we will look for another special, Namaqua Warbler. The dry plains will be birded extensively for a range of exciting species such as Rufous-eared Warbler, Black-headed Canary, White-throated Canary, Karoo and Tractrac Chats, Karoo, Spike-heeled, and Large-billed Larks, Karoo Eremomela, Pririt Batis, Ludwig's Bustard, Karoo Korhaan, Pale Chanting Goshawk, Namaqua Sandgrouse, Namaqua Dove, and many others. The erratic Burchell's Courser is seen from time to time however sightings of this desert nomad are unfortunately rare and unpredictable. Similarly, depending on unpredictable Karoo rains, Black-eared Sparrow-Lark may sometimes occur in large numbers, however it is only during exceptional years that we see this erratic species, here at its southern extent. We may then head out this evening to search for Freckled and Rufous**cheeked Nightjars** and any other exciting nightlife we may encounter.

Overnight: Tankwa Karoo/similar

Many species occur here that have 'Karoo' in their names – such as this **Karoo Lark**.

Day 7. Transfer to Cape Town

After some early-morning Karoo birding, searching for anything we have missed over the last couple of days, we head out of the Karoo and back toward Cape Town. On our way back we will stop on a beautiful mountain pass to search for Protea Canary and Victorin's Warbler and may get lucky with a flyover Verreaux's Eagle.

Once back in Cape Town we will have part of the afternoon to bird at Kirstenbosch National Botanical Garden. The gardens here are incredibly beautiful, complete with Table Mountain as a backdrop. In the beautifully maintained gardens we will look for Orange-breasted Sunbird and Cape Sugarbird feeding on Protea flowers, while Cape Spurfowl, African Olive Pigeon, Olive Thrush, African Dusky Flycatcher, Cape Batis, Southern Boubou, Cape Canary, Brimstone Canary, Swee Waxbill and Lemon Dove should all be seen while walking around the gardens.

Overnight: Greater Cape Town area

Protea Canary — a Cape endemic

Day 8. Departure

This is the departure day and the tour ends after breakfast, without any further Cape Town birding planned. This tour links up with our <u>Subtropical South Africa birding tour</u> for which we usually catch mid-morning flights to Durban. If you are not joining the Subtropical South Africa tour, you can depart Cape Town at your leisure.

For those joining both these Cape and Subtropical birding trips, the Birding Ecotours office will book the one-way flight from Cape Town to Durban, with everybody on the same flight (this flight cost is excluded from tour prices and usually costs around R2,000-R3,000).

Please note that the itinerary cannot be guaranteed as it is only a rough guide and can be changed (usually slightly) due to factors such as availability of accommodation, updated information on the state of accommodation, roads, or birding sites, the discretion of the guides, and other factors. In addition, we sometimes have to use a different guide from the one advertised due to tour scheduling or other factors.

Duration: 8 days **Group Size:** 4-6

Dates: 07 - 14 October 2025

07 – 14 October 2026

Start: Cape Town, South Africa
End: Cape Town, South Africa

Prices: R58,500 per person sharing, based on 4-6 participants (2025)

R64,350 per person sharing, based on 4-6 participants (2026)

Single supplements: R7,875 (2025)

R8,665 (2026)

Price includes:

All accommodation
Meals (from dinner on Day 1 until breakfast on Day 8)
Unlimited bottled water
Expert tour leader
All entrance & conservation fees
All ground transport, including airport pick-up and drop-off
Private Cape Town pelagic trip

Price excludes:

International/domestic flights (to/from Cape Town)

Visas

Items of a personal nature, e.g. gifts, laundry, internet access, phone calls, etc.

Any pre- or post-tour accommodation, meals, or birding excursions

Soft/alcoholic drinks

Personal travel insurance

Gratuities (please see our tipping guidelines blog)
